

Compact, High Speed Lid Dropper

Kinesys Automation introduces a compact lid dropper for friction plug style lids!

Kinesys Automation has introduced its compact, high speed lid dropper for friction plug style lids. Approaching speeds of 50 cycles a minute, this family of units feature a starwheel alignment fixture to ensure accurate placement of lids. All size change adjustments are made quickly and easily by means of locking levers and handwheels, eliminating the need for tools.

The starwheel alignment fixture ensures that all lids are correctly positioned on the can prior to the lid closing operation.

Starwheel assemblies are quickly switched out to minimize changeover downtime.

- Compact footprint.
- Compatible with half pint through gallon size friction plug lids.
- Available for plastic lids through 12" diameter.
- Available with an integrated roller closer.
- Optionally available for explosion proof applications.
